Your Data Your Way

Prospector lets banking professionals quickly and intelligently access their data utilizing the Portfolio Plus Compendium and a server-based architecture.

Overview

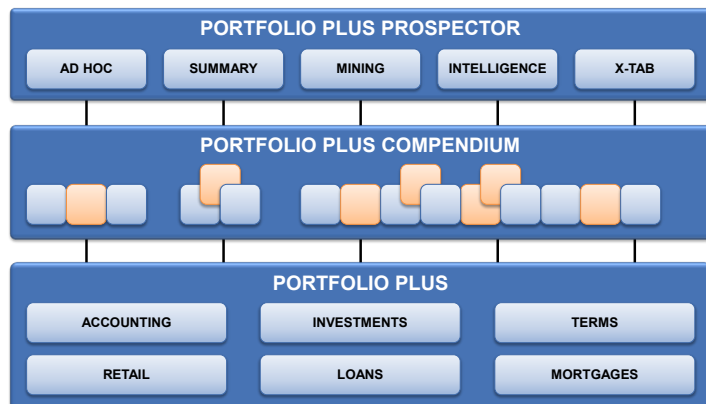

If you have specialized data reporting or data mining requirements that surpass the standard reports included with Portfolio Plus, you can use Prospector to fulfill this need. You will be able to harvest your financial and customer relationship information fast and effortlessly.

Introducing Prospector

Prospector is available to Portfolio Plus users who want to dramatically enhance their custom reporting capabilities. Business intelligence, customer relationship management, data mining, ad hoc queries, and summary reports are just a few of the ways customers can use Prospector to enhance their business.

Prospector Intelligence with Portfolio Plus Compendium

Prospector includes the Portfolio Plus Compendium, which is a layer of abstraction provided so users can more easily understand the data tables that reside within Portfolio Plus and the relationships between those tables. The Portfolio Plus Compendium also enables wizards that can be used by Prospector.

Prospector: Server Based Performance for Speed

Information technology professionals and database architects alike will appreciate Prospector's ability to resolve queries on the server—it sends only the query results to the client workstation. This offers a dramatic speed improvement over typical reporting tools.

Wizards for Step by Step Report Creation

Prospector offers user-friendly wizards, allowing users to experiment without being intimidated. The wizards encourage users to explore Prospector's capabilities during the report creation process, making it easy to find the query data and presentation format that's right for you.

Query Functionality

Prospector allows for the following types of query functionality:

- Nest conditions
- Grouping of data on multiple levels
- Multiple sorting
- User prompted conditions
- Average, minimum, maximum, sum, count
- Calculated fields
- Intelligent joins (from the Compendium)
- Percentages
- Conditions
- Filters

Prospector and Cyberscience

Prospector combines the power of the Portfolio Plus banking software solution with technology from Cyberscience Corporation. Cyberscience is a partner of Strategic Information Technology and has been providing high performance reporting technology for over 25 years.

Formatting Options

Prospector accommodates the following format options:

- Tabular
- Summary or Group Sort
- Cross Tabular or Matrix
- Master-Detail
- Header and footer control, page numbers, total pages, date, time, horizontal and vertical positioning
- Output: paper, screen, HTML, flat file, labels, spreadsheet, E-Mail
- Interactive screen drill-down

Visual Editor & Cyberquery Language

Advanced users can unleash the power of the Cyberquery language available with Prospector.

Users can switch between the Cyberquery language interface and the visual editor interface at will, empowering experienced users who are comfortable with the data to type their queries directly instead of using the visual interface.

Prospector: Support and Services

Technical support for Prospector, along with training and custom development, is provided by Strategic Information Technology. Contact your customer account representative to obtain a quote for these services.
